The Bean Study

Adults (≥18 years) with elevated LDL cholesterol (3-5 mmol/L) are needed for a nutrition study to examine the cholesterol-lowering effects of beans.

This study will involve:

• 1 screening phone call (5-10 min)
• 1 screening study visit (30-45 min; includes LDL cholesterol test)
• 1 study orientation (30-45 min)
• Three 4-week treatment periods which will each involve:
  o Three study visits (30-45 min)
  o Body measurements (start, middle and end)
  o Fasting blood sample and fecal sample (start and end)
  o 3-day food record (once in the middle)
  o Appetite and tolerance survey (5 days on 3 occasions)
  o Study treatment consumption log (every day)

*Financial Compensation Provided*

This study is being conducted by the Department of Human Health and Nutritional Sciences and has received clearance from the University of Guelph Human Research Ethics Board (REB#18-10-045).
